Introduction

The term “membership,” or “average daily membership,” as used throughout this report for public schools refers to the average number of students per day on the public school rosters during the first 135 days of school. Membership counts for private schools are those students who were enrolled as of October 1 or at the end of the first month during which classes were held. Students reported by parents as being taught at home by the parents are counted as home school membership.

Membership for kindergarten through grade twelve in South Carolina public schools increased by 12,965 students, for a total of 661,335, between the 1999–2000 and 2003–04 academic years. That increase amounts to an average gain of nearly 2,593 students per year. In contrast, membership for kindergarten through grade twelve during the academic years from 2004–05 to 2009–10 is projected to increase by 14,600 students. Membership for kindergarten through grade twelve in South Carolina public schools is projected to reach 668,700 in 2009–10.

Membership projections, which are calculated using average daily membership in conjunction with the cohort-survival procedure, are produced annually to give insight into trends within the state and within individual school districts. Various charts and tables are presented to facilitate educational planning. Act 164 of 1993 changed the date by which a child must attain a certain age to enter school from November 1 to September 1. The date change decreased the kindergarten membership in South Carolina schools by approximately 7,000 students in 1995–96. That class of approximately 7,000 fewer students started moving through the grade levels in 1995–96. The effect of Act 164 on membership will generally diminish with the senior class of 2008.

Changes that result from future legislation or economic developments could alter the figures presented in this document. For example, the closing of a military installation could result in pupil counts lower than projected. On the other hand, the opening of a manufacturing facility could result in pupil counts higher than projected.

Membership projections for individual districts are rounded to tens, while the state projections are rounded to hundreds. Due to this rounding procedure, the sum of projections by grade may not equal the district total, and the sum of the district totals may differ slightly from the state totals.

Table 5 tracks the movement of students at selected intervals from birth to college entrance. The groups enumerated at these selected intervals contain different individuals due to migration, deaths, nonpromotions, and other circumstances. Only statewide figures are presented in table 5. Individuals can obtain county figures by coming to the State Department of Education’s Office of Research at 1429 Senate Street, Columbia, South Carolina 29201, by telephoning the Office at 803-734-0639, by e-mailing the request to vwatson@ed.sc.gov, or by faxing the request to 803-734-2983.

All state totals in this publication include only figures from the forty-six counties or eighty-five geographic school districts. Special schools and districts that serve more than one county, such as the South Carolina Department of Juvenile Justice and Felton Laboratory School, were excluded.

Caution should be exercised by all users of the projections contained in this publication because of their dependence on certain ratios remaining constant. All projections are updated each year as membership data are received and compiled by the State Department of Education (SDE).

Projected Trends

Public School Membership Projections

Total membership for kindergarten through grade twelve in South Carolina public schools will increase during the period from 2003–04 to 2009–10. Membership is projected to increase by 20,330 students from 1999–2000 to 2009–10. Between 2004 and 2010, there will be a net increase of about 7,635 public school students (see figure 1). Of this net increase, the changes by grade level range from an increase of over 4,307 students in third grade to a decrease of nearly 2,722 students in ninth grade (see table 1).

Membership in kindergarten through grade six decreased by 4,348 to 359,297 between 1999–2000 and 2003–04 (see figure 2). Actual figures for kindergarten through sixth-grade membership have been reduced by approximately 7,000 between 1999–2000 and 2000–01 because of Act 164 of 1993, which moved forward by two months the required entrance age for kindergarten students. Projected figures for kindergarten through sixth-grade membership will increase by more than 7,900 to about 367,200 by 2009–10.

Membership in grades seven through eight increased by less than 3,839 between 1999–2000 and 2003–04 and is projected to decline by more than 2,687, to approximately 105,400, by 2009–10 (see figure 3).

Membership in grades nine through twelve has been increasing since 1990–01 and is expected to continue increasing through 2009–10 (see figure 4).

Of the eighty-five school districts, thirty-one (36 percent) are projected to have declining memberships each year between 2003–04 and 2009–10. Additionally, twenty-six districts (31 percent) are projected to show an overall decline in membership over this time period; however, a decline is not expected to occur every year.

Sixteen school districts (19 percent) are projected to have consistently increasing memberships from 2003–04 to 2009–10. Another twelve districts (14 percent) are projected to show increases in membership over this time period but not for every year during the interim.

Seven districts are projected to have a net increase in membership of at least 10 percent from 2003–04 to 2009–10. Additionally, nine districts are projected to increase at least 5 percent but less than 10 percent by 2009–10. Thirty-three school districts are projected to decrease at least 5 percent by 2009–10. The remaining thirty-six districts are projected to increase or decrease less than 5 percent during the time span.

Of the seven school districts projected to have increases in membership of at least 10 percent from 2003–04 to 2009–10, three districts—Horry, Richland School District Two, and Beaufort—will increase by more than 2,500 students:

District	Membership		Number Increase	Percent Increase
	2003–04	2009–10		
Horry	30,395	34,760	4,365	14.4%
Richland 2	18,902	23,160	4,258	22.5%
Beaufort	17,288	20,780	3,492	20.2%

The Horry County School District is projected to have the largest increase in the number of students (4,365) of any school district between 2003–04 and 2009–10. Clarendon School District Three is projected to gain 305 students (24.1 percent), the highest projected percentage increase. Membership in the McCormick County School District is projected to decrease by 239 students (24.2 percent) between 2003–04 and 2009–10, the largest percentage of decrease among all the districts. Membership in the Aiken School District is projected to decrease by 1,104 (4.6 percent) between 2003–04 and 2009–10, the largest loss in numbers among all the districts.

Private and Home School Membership Projections

Private school membership in South Carolina fell from 54,047 in 1978–79 to 42,586 in 1992–93. Membership in private schools decreased by over 1,262 students to 52,724 between 1999–2000 and 2003–04, a loss of about 2 percent. Home schooling decreased from 3,004 students in 2002–03 to 815 in 2003–04 due to changes in data collection procedures (see table 2). Projected student counts for private and home schools combined are graphically displayed in figure 5. The projected figure of 53,500 students in private and home schools for 2004–05 through 2009–10 was obtained on the basis of the assumption that the 2003–04 actual membership would not change. Projected total state membership for public, private, and home schools is displayed in figure 6.

^a South Carolina Department of Education, Office of Research, *Average Daily Membership by Grade, by District, 135-Day Period*, 1998–99 through 2003–04. Includes student counts for the eighty-five geographic school districts.

^b South Carolina Department of Education, Office of Research, *Enrollment in Private and Parochial Schools*, 1998–99 through 2003–04. Counts include enrollment from reports received after July 15 for the school year just ended and enrollment listed on forms from *Chapter 2 Private School Participation* for FY 1999 through FY 2001 and forms from *Title VI Private School Participation* for FY 2002 through FY 2005.

^c South Carolina Department of Education, Office of Finance, "Home Instruction Report," 1998–99 through 2003–04, South Carolina Association of Independent Home Schools, 1998–99 through 2003–04. The 2001–02 count includes enrollment from private home school associations obtained from a telephone survey conducted by the South Carolina Budget and Control Board in January 2002. The 1998–99 through 1999–2000 counts include enrollment from home school associations reported to the Office of School Quality.

^d The 2000–01 and after count does not include enrollment from home school associations. Associations reported enrollment counts to appropriate school districts.

^e Private school projections for 2004–05 through 2009–10 are assumed to be constant, based on the 2003–04 figures.

^f Home school projections for 2004–05 through 2009–10 are assumed to be constant, based on the 2003–04 figures.

Procedures Used for Membership Projections

Cohort-Survival Procedure

The procedure currently used for projecting public school membership for grades two through twelve in South Carolina school districts is referred to as the cohort-survival procedure. This procedure is probably the most widely used for making short-range membership projections. The procedure currently does not utilize kindergarten membership. Kindergarten projections are explained later in this section.

The data requirements for implementation of the cohort-survival procedure are (1) projected first-grade membership for each year of the projection period and (2) a matrix of grade-to-grade survival ratios. The projection period is the range of years for which membership is to be projected. A survival ratio is the quotient obtained by dividing the membership of one grade for a school year into the membership of the next higher grade a year later. The survival ratios are different for each school district and for each grade level. However, the survival ratios for a given grade level and district tend to remain relatively constant from year to year.

There are some cases, however, in which the survival ratios change dramatically from one year to the next. For example, a small school district could experience a large percent change in membership due to the opening or closing of an industrial plant within the district. Legislative decisions also could affect membership in some districts. Survival ratios are somewhat more or less than 1.0. A survival ratio less than 1.0 indicates the net effects of students moving out of the district, deaths, nonpromotions, dropouts, and transfers to private schools. A survival ratio greater than 1.0 indicates the net effects of students moving into the district, promotions, and transfers from private schools.

For the state of South Carolina (all districts combined), the grade-to-grade survival ratios are distributed as shown below in table 3.

TABLE 3: SOUTH CAROLINA GRADE-TO-GRADE SURVIVAL RATIOS

Less than One		Very Close to One		Greater than One	
Grade	Ratio	Grade	Ratio	Grade	Ratio
1 to 2	.971	2 to 3	1.002	8 to 9	1.223
7 to 8	.978	3 to 4	1.002		
9 to 10	.767	4 to 5	1.003		
10 to 11	.798	5 to 6	1.023		
11 to 12	.944	6 to 7	1.008		

Matrix of Survival Ratios by Grade and by District for Public Schools

The matrix of survival ratios is computed by dividing the membership of grades one through eleven into the membership of grades two through twelve of the succeeding year. An average is computed from five years of data.

Public First-Grade Membership Projections

The matrix of survival ratios is used to project the membership for grades two through twelve based on the membership for grades one through eleven of the preceding year. The matrix does not, however, project the membership for the first grade. The first-grade membership projections are based on (1) the number of county births six years prior to the projection year and (2) the ratio obtained by dividing the most recent first-grade membership for the county by the number of county births six years earlier.

Approximately half of the projected school membership for 2009–10 (grades 1–6) is determined by the projected first-grade membership. The first-grade cohort of 2004–05 will progress to the sixth grade of 2009–10. Caution should be exercised in using projected memberships as forecasts, particularly those that are dependent upon the first-grade projections. Some factors that may cause projected memberships to differ substantially from actual first-grade memberships are (1) the six-year time span between births and first-grade membership, (2) migration of population, and (3) the method of allocating county births to districts within the county.

The data requirements for projecting the membership for grades two through twelve were satisfied after the projected first-grade membership figures and the matrix of survival ratios were obtained. The survival ratios were applied consecutively to obtain the projected memberships by grade for each school district from 2003–04 through 2009–10.

Public Kindergarten Membership Projections

The first school year that kindergarten attendance became mandatory for the state of South Carolina was 1984–85. Since that time, the percentage of public first-grade students having attended public kindergarten programs has shown an increasing trend.

Private schools were once the primary source of kindergarten training. The projected percentages of first-grade students enrolled in South Carolina public schools expected to have had preschool training through state-supported public kindergarten programs ranged from 76.9 for 2003–04 to 75.8 for 2009–10. Of course, as is the case now, there will be wide variations among the school districts in the percentage of students receiving kindergarten training through public programs.

Comparison of Actual and Projected Public School Membership

School district membership was projected for the 2003–04 school year in the previous five editions of this publication. Table J, in the appendix, presents the percent errors in the 2003–04 figures for membership projections made in each of the previous five editions. Percent errors are presented for each school district and for the state. The errors are expressed as percent differences between actual and projected memberships from one year ahead to six years ahead.

An idea of the error to expect for a school district can be gleaned from an examination of both table 4, below, and table J. The average percent error for school districts by membership-size category is presented in table 4.

TABLE 4: AVERAGE ERRORS (MEAN ABSOLUTE PERCENT ERROR BETWEEN ACTUAL AND PROJECTED MEMBERSHIP)

District Membership Size, Grades K–12	Number of Districts	One Year Ahead	Two Years Ahead	Three Years Ahead	Five Years Ahead	Six Years Ahead
20,000 and above	6	2.2%	2.5%	3.4%	3.3%	4.8%
10,000–19,999	12	2.1%	3.2%	3.2%	3.4%	5.3%
5,000–9,999	21	1.4%	1.7%	1.1%	0.1%	2.1%
2,500–4,999	24	0.9%	0.0%	0.5%	1.1%	1.0%
1,500–2,499	9	0.4%	0.7%	0.7%	0.5%	1.5%
Below 1,500	13	0.7%	1.1%	0.4%	2.5%	1.6%

The error averaged about 0.6 percent for projections made one year ago in the forty-six districts with membership below 4,999. However, the average error made one year ago in projecting membership in the thirty-nine largest districts was under 2 percent. The average percent error generally increases as the number of years ahead increases.

Districts with 9,999 students or less generally had average errors less than those with 10,000 students and above. The exception was the five-years-ahead projection, for which the error was 2.5 percent for districts in the size category of 1,500 and below. The error for the state (see table J) averaged about 1.7 percent for projections made one year ahead and two years ahead but was nearly 3.4 percent for projections made six years ahead.

Student Counts at Selected Intervals from Birth to College Entrance

State estimates of basic statistics that are relevant to educational planning in South Carolina are provided in table 5. Actual and projected counts are included for the first, eighth, and twelfth grades in addition to actual and projected counts of high school completers and completers who enter a college degree program. All projected grade counts are based on average daily membership. Projections are located below the solid line and actual counts above the solid line.

The historical counts for live births are compiled by place of residence. These counts are taken from the various annual reports made by the State Department of Health and Environmental Control. All enrollment and membership data are taken from the official student counts collected by the Office of Finance and summarized by the Office of Research, both within the SDE. The counts for high school completers and completers entering college are taken from the 1990–91 through 1993–94 editions of the *Annual Report of the State Superintendent of Education* and the 1994–95 through 2003–04 editions of the SDE's "College Freshman Report." The numbers of high school completers entering college in the fall are identified in the source documents as students entering junior or senior colleges or degree programs in technical education colleges.

Projections of high school completers are based on the completion rate of the most recent year available. Current efforts to reduce dropouts may result in higher completion rates than those projected. Projections of the numbers of high school completers entering college are based on the college entrance rate of the most recent year available. Because less than one year elapses between a student's completing high school and his or her entering college, the percent of high school completers entering college is affected more by economic trends and alternatives to junior and senior colleges than by migration. Projected high school completers and completers entering college are rounded to hundreds.

Data in table 5 reveal that South Carolina's live birth count increased from 46,665 in 1975 to 58,461 in 1990. By 1995, the birth count had dropped to 50,913. Since 1996 the live birth count has steadily increased yearly to 55,461 in 2003.

TABLE 5: SOUTH CAROLINA BIRTHS, SELECTED GRADE COMPARISONS, HIGH SCHOOL COMPLETERS (HSCs), AND NUMBER ENTERING COLLEGE (ACTUALS AND PROJECTIONS)

Cal. Year	Birth Counts	School Year	1st Grade Counts ^b	% of Births	School Year	8th Grade Counts	% of 1st Grade in 8th Grade	School Year	12th Grade Counts	HSC Counts ^c	% of 1st Grade HSCs	% of 8th Grade HSCs	% of 12th Grade HSCs	# of HSCs Entering College	% of HSCs Entering College

^a Counts exclude students within Felton Laboratory School, the South Carolina School for the Deaf and Blind, the Palmetto Unified School District, and the South Carolina Department of Juvenile Justice. Student counts may differ slightly from cited source documents due to the inclusion of data from school reports that were received after the sources were published. Completers include diploma and certificate recipients.

^b Counts by grade will differ slightly from that shown within the source documents cited in the bibliography due to the distribution of students in upgraded classes and self-contained special education classes into the appropriate grades.

^c Counts include only the students who entered college in the fall of the school year immediately following the school year in which they completed high school.

^d Completion rate does not reflect current efforts to reduce dropouts. Some of the displayed rates for future years are partially based on factors that have already occurred. Any substantial improvement in the rates will be due to current programs, the impact of which cannot yet fully be determined.

The first-grade count of 50,981 students in 2003–04 increased from the first-grade count in 2002–03 by 1,169. The small first-grade count of 1996–97 was due to Act 164 of 1993, which moved forward by two months the required age for kindergarten students of 1995–96. Over the years, the number of first graders has fluctuated. However, during the period from 1981–82 through 2003–04, the number of first-grade students steadily increased from 47,947 to 50,193. The 1988–89 count was, in fact, the largest since 1970–71, when 62,152 first graders were reported. Most of the increases or decreases can be attributed to increases or decreases in live births. Recent trends in tightening promotion standards in South Carolina have probably affected the size of the first grade as well. Under current local policies, students not meeting promotion criteria are required to repeat the first grade.

The eighth-grade membership in South Carolina in the late 1970s was less than 96 percent of the first-grade membership seven years earlier. Then, throughout the 1980s, the eighth-grade membership was within 2.5 percentage points of the first grade seven years earlier. But in 1990, the eighth-grade membership again fell below 96 percent of the corresponding first-grade membership. For the past four years, the eighth-grade count has been above 96 percent of the first-grade count seven years earlier.

The number of first graders completing high school after eleven years has fluctuated between 58 percent and 69 percent for the past ten years. The number of eighth graders completing high school four years later has ranged between 64 percent and 70 percent for the past ten years and, without intervention, can be expected to remain below 71 percent for the graduating classes of 2005 through 2010.

The completion rate for twelfth graders was 95 percent in 1992–93 and 96 percent in 2002–03. Without intervention, this rate is expected to remain under 97 percent through the year 2010. The number of high school completers entering college was 65 percent in 2003, up from 55 percent a decade earlier. The college entrance rate is expected to remain above 64 percent through the year 2010.
