

**Qualified Product Policy for:
Air Entraining and Chemical Admixtures for Concrete**

All suppliers who wish to be included on the Qualified Product List (QPL) 5 for Air Entraining and Chemical Admixtures for Concrete must complete product evaluation by AASHTO's National Transportation Product Evaluation Program (NTPEP). Information on enrolling in the NTPEP evaluation program for Concrete Admixtures (CADD) can be found at www.ntpep.org.

Once NTPEP testing has been successfully completed, submit a letter requesting inclusion on SCDOT's QPL 5 with the product's NTPEP ID number and date of testing to the contact listed below. The product's NTPEP test data will be reviewed for conformance with all applicable requirements of Subsection 701 of the SCDOT Standard Specifications (requires all air entraining admixtures to comply with AASHTO M154 and accelerating, retarding, water reducing and specific performance admixtures to comply with AASHTO M194). If the product meets all requirements it will be placed on the QPL.

It is the supplier's responsibility to contact the Department in the event that the product's formulation changes. The Department reserves the right to request further testing by the supplier or NTPEP in order for the product to retain qualified status.

In order to remain on QPL 5, the product must remain current in NTPEP datamine and must be retested by NTPEP at least every 5 years. To confirm retesting status, submit the NTPEP ID number and date of testing to the contact listed below.

If at any time the product fails to perform satisfactorily, it may be removed from QPL 5 until improvements are made to the satisfaction of the SCDOT.
