

**Qualified Product Policy for:
Concrete Curing Compounds**

All suppliers who wish to be included on the Qualified Product List (QPL) 33 for Concrete Curing Compounds must complete product evaluation by AASHTO's National Transportation Product Evaluation Program (NTPEP). Information on enrolling in the NTPEP program for Concrete Curing Compounds (CCC) can be found at www.ntpep.org.

Once NTPEP testing has been successfully completed, submit a letter requesting inclusion on SCDOT's QPL 33 with the product's NTPEP ID number and date of testing to the contact listed below. The product's NTPEP test data will be reviewed for conformance with all applicable requirements of Subsection 702 of the SCDOT Standard Specifications. If the product meets all requirements it will be placed on the QPL.

It is the supplier's responsibility to contact the Department in the event that the product's formulation changes. The Department reserves the right to request further testing by the supplier or NTPEP in order for the product to retain qualified status.

In order to remain on QPL 33, the product must remain current on the NTPEP database and must be retested by NTPEP at least every 3 years. To confirm retesting status, submit the NTPEP ID number and date of testing to the contact listed below.

If at any time the product fails to perform satisfactorily, it may be removed from QPL 33 until improvements are made to the satisfaction of the SCDOT.
