Violence Against Women in South Carolina

The violent victimization of women is a problem that has received attention at both the state and national level in recent years. Enactment of the Violence Against Women Act (VAWA) as set out in Title IV of the Violent Crime Control and Law Enforcement Act of 1994, is one measure of the level of concern. As a result of this act considerable time, effort and resources have been devoted to addressing this problem. Other programs such as the STOP (Services, Training, Officers, Prosecutors) Violence Against Women Formula Grants Program provide an indication of the level of attention given to the problem of violence against women. This act authorized financial assistance to states for developing and strengthening effective law enforcement and prosecution strategies, and for victim services in cases involving violent crimes against women. Other measures such as the development of the Sex Offender Registry demonstrate an increased awareness of the need to deal with this problem. Yet there has not been a great deal of information made available to policy makers concerning the nature and extent of violence against women in South Carolina. The purpose of this report is to establish a descriptive overview of this problem, based on an examination of incident reports of certain crimes against women over several years.

The following report represents an overview of women victims of violent crime, as taken from the South Carolina Incident Based Reporting System (SCIBRS) during the 1996 through 1999 time period. These data are collected and maintained by the State Law Enforcement Division (SLED), and were made available to the South Carolina Department of Public Safety for the specific purpose of this report. It is worth noting that South Carolina is unique in being able to provide this level of information over an extended period of time. Presently, only two other states have 100% law enforcement participation with statewide data meeting the FBI's standards for the National Incident Based Reporting System (NIBRS) and they just recently achieved that level of participation. South Carolina has been a part of the NIBRS program since its inception, with statewide participation throughout.

Methodology

For the purpose of this report, a comprehensive definition of violence has been employed. The operational definition of violence includes the following offenses: murder, negligent homicide, rape, forcible sodomy, sexual assault with an object, forcible fondling, robbery, aggravated assault, simple assault, intimidation, and kidnapping. Women were defined as any reported victim who was female, regardless of age.

Incident reports are taken by law enforcement officers whenever a criminal incident is reported or otherwise comes to their attention. These reports contain much of the basic information pertaining to the incident, information concerning who was victimized, what if any weapons were involved, what sort of offense took place as well as other information. These reports are forwarded to SLED for entry into the SCIBRS data set. SCIBRS data for calendar years 1996, 1997, 1998 and 1999 provided the basis for this analysis. Data were taken from the victim segment of the record and linked to the offense segment as needed to provide information required for analysis. Links were made on the basis of case numbers. This particular analysis is based on data from final, corrected tapes for 1996, 1997 and 1998 and from the 1999 end of year file tape, a file which consists of all incidents as they were reported to SLED by the cutoff date for data entry. Since SLED maintains a two-year window for updates, edits and corrections, the 1999 end of year file will be replaced in 2001 by a file which will contain any edits or corrections that are entered during 2000. Population estimates used to calculate victimization rates for women crime victims and various sub-populations, were provided by the South Budget and Control Board's Office of Research and Statistics (BC&B ORS).

It is important to understand that there are limitations to the SCIBRS data set. SCIBRS does not have any means of identifying individuals (either victims or offenders), therefore these data cannot be linked to other data sets which might provide information beyond that collected on the incident report. Also, since SCIBRS can only provide information concerning reported events, violent crimes which are not reported to law enforcement, are not included. It is reasonable to believe that some portion of violence against women is not reported to law enforcement.

Findings

State Overview

Over the 1996 through 1999 time period, there were a total of 292,994 women victims of violence. The number of women reported as victims over that time period has been fairly consistent from year to year. Although the victimization rate increased 3.9% from 1996 to 1997, there has been relatively little change over the following three years.

Table 1
Victimization by Year

<u>Year</u>	<u>Victims</u>	<u>Rate</u>	<u>Pct.</u> <u>Change</u>
1996	70,301	363.0	
1997	74,092	377.3	+3.9
1998	74,485	374.5	-0.7
1999	74,116	368.6	-1.6

Note: Rate per 10,000 women.

Source: SCIBRS, SLED; Population estimates, B&CB ORS.

Simple assault, an assault in which less than deadly force was involved (see Appendix A) and no serious injury or weapon was involved, was the offense most often reported. Murder and negligent homicide were the offenses least often reported, accounting for less than 1 percent of total offenses.

Table 2
Victims by Offense

<u>Offense</u>	<u>Number</u>	<u>Pct.</u>
Murder	347	0.1
Negligent Homicide	10	<0.1
Rape	7,136	2.4
Forcible Sodomy	1,209	0.4
Sexual Assault w/ Object	875	0.3
Forcible Fondling	5,483	1.9
Robbery	10,284	3.5
Aggravated Assault	46,785	16.0
Simple Assault	174,769	59.6
Intimidation	43,768	14.9
Kidnapping	2,328	0.8

Source: SCIBRS, SLED

Black women accounted for a majority (51.3%) of women victims. This disproportionate level of victimization is representation is evident when compared to the racial distribution of women within the state according to the 1990 Census totals: 68% White, 30.8% Black and 1.1% all other racial categories.

Table 3
Victims by Race

Race	Number	Pct.
Asian	660	0.2
Black	150,274	51.3
Native American	318	0.1
Unknown	394	0.1
White	141,348	48.2

Source: SCIBRS, SLED

Non-White (Asian, Black and Native American) women experienced higher levels of violent victimization compared to White women. The victimization rate for Non-White women was 597.9 per 10,000 from 1996 through 1999, compared to 263.2 per 10,000 for White women during the same time period.

Table 4
Victimization Rates by Racial Group

Year	Non-White	White
1996	602.4	249.2
1997	609.4	266.8
1998	598.3	268.5
1999	581.7	267.9
Total	597.9	263.2

Note: Rate per 10,000 women within that racial group.

Source: SCIBRS, SLED; Population estimates, B&CB ORS.

Ethnicity, as used in this report and by SCIBRS, identifies a person as being either Hispanic or Non-Hispanic. Ethnicity is independent of race, i.e., victims reported as belonging to one of SCIBRS' racial categories are also reported as being either Hispanic or Non-Hispanic. Very few Hispanic women were reported as victims of violent crimes. A total of 1,108 Hispanic women were reported as victims of violence, accounting for 0.4% of the total.

Although women victims ranged in age from newborns to the very elderly, victimization was concentrated among young adult women. Women from 18 to 34 accounted for 55.5% of victims. Pre-teen girls accounted for 5.1% of victims. Similarly, women 55 years of age or older, accounted for 3.4% of victims. The highest victimization rate was experienced among women from 18 through 21 years of age, followed by women from 22 through 24 years of age. Women 65 years of age or older experienced the lowest rate of violent victimization.

Table 5
Victimization by Age Group

Age Group	Number	Pct.	Rate
0 – 5	4,787	1.6	79.0
6 - 12	10,213	3.5	138.4
13 – 17	32,043	10.9	596.8
18 – 21	41,665	14.2	975.3
22 – 24	28,080	9.6	862.9
25 - 34	87,009	29.7	748.3
35 – 44	58,924	20.1	469.0
45 – 54	19,947	6.8	194.3
55 – 64	5,995	2.0	85.0
65 & older	4,112	1.4	37.2

Note: Rate per 10,000 women within that age group.

Source: SCIBRS, SLED; Population estimates, B&CB ORS.

Women Victims by Age

SCIBRS allows for reporting twenty-six different relationships between the victim and the offender. The most often reported relationship was that of an acquaintance, i.e., someone known to the victim, but not considered to be a friend, neighbor or closer

relationship. Acquaintances accounted for 27.7% of violent victimization against women. That was followed by the victim to offender relationship of spouse which accounted for 18.3% of victims, and boyfriends which accounted for 17.9% of victims. The victim to offender relationship categories were collapsed into five groups: family relationships, romantic relationships, ex-spouses, known to the victim and not known to the victim. Family relationships included spouses, common-law spouses, parents, step-parents, children, step-children, siblings, step-siblings, grandparents, grandchildren, in-laws and other family members. Romantic relationships included the categories of boyfriend and homosexual relationships. The group ex-spouse included only ex-spouses. The group known to the victim included the following: acquaintance, friend, employer, employee, neighbor, baby-sittee (the child taken care of) and otherwise known. The group stranger included only strangers. The categories victim was offender and relationship unknown were treated as missing data. Family relationships accounted for more victims than any other victim to offender relationship category.

Table 6
Relationship of Victims to Offenders

Victim to Offender Relationship Group	Number	Pct.
Family	105,895	37.5
Known to Victim	93,956	33.3
Romantic	50,925	18.0
Stranger	27,655	9.8
Ex-spouse	4,037	1.4

Source: SCIBRS, SLED

The most often reported location or premise type at which women were violently victimized was at a residence or home. This location category alone accounted for 62.5% of victims of violence. That was followed by the location category of highway/road/alley, which accounted for 9.5%, and apartment/condominium which accounted for 8%.

For the purpose of this analysis, some of the weapon categories were collapsed into more comprehensive groups. The category, firearms, includes rifles, shotguns, handguns, other firearms and unknown firearms. The weapon category, other, includes motor vehicle, poison, explosives, fire, drugs, drowning, strangulation, pushed from high place, all other and unknown. The category knives includes knives or other cutting instruments. The weapon category blunt objects includes implements such as clubs, hammers or other objects used to bludgeon. The category personal weapons, consists of hands, fists, feet, teeth or other body parts used to harm another. It does not include personally owned weapons that would fit under one of the other categories

The weapon type most often used in the victimization of women was personal weapon, defined by SCIBRS as the use of hands, feet, fists or other body parts. Personal weapons

were involved in 66% of cases of violent victimization. Other weapons accounted for 20.4% of violent victimization cases, followed by firearms (5.3%) and knives (4.1%). Handguns (a subset of all firearms) were involved in 3.9% of violent victimization.

Table 7
Weapons Use in Violence

Weapons	Number	Pct.
Personal weapons	193,517	66.8
Other	59,186	20.4
Firearms	15,266	5.3
Knives	11,917	4.1
Blunt objects	9,915	3.4

Source: SCIBRS, SLED

SCIBRS collects basic data concerning injuries inflicted on crime victims. The following represents the most serious injury reported per victim based on the reporting officer's observation, for those cases in which an injury was reported. It does not include death (homicide victims) as a category. It is important to note that these data are based only upon the officer's observations, and should not be considered the equivalent to the observations of trained medical personnel. The injury category, minor injuries, refers to injuries where medical aid was not indicated. The injury category, other major injury, refers to injuries where medical aid was reasonably expected. The injury category, unconsciousness, refers to the victim being knocked out, not simply fainting. Among all women victims, no injury was reported in 61.6% of the cases. Among those cases in which an injury was reported, the injury most often reported was a minor injury.

Table 8
Injuries Resulting From Violence

Injury	Number	Pct.
Minor injury	97,550	86.9
Severe laceration	7,744	6.9
Other major injury	4,393	3.9
Internal injury	1,127	1.0
Broken bones	1,081	1.0
Unconsciousness	177	0.2
Loss of teeth	172	0.2

Note: Cases where death or no injury was reported are excluded.

Source: SCIBRS, SLED

Violence against women occurred most often on weekends, with Saturdays accounting for 17.4% of the cases and Sunday accounting for 15.2% of the cases. Violence occurred least often on Wednesday, accounting for 13.1% of the cases.

Table 9
Violence by Day of the Week

Day of the Week	Number	Pct.
Sunday	44,592	15.2

Homicide

Homicide includes both murder and negligent homicide. During the 1996 to 1999 time period, there were 347 women murder victims and 10 women negligent homicide victims. There were 99 women homicide victims in 1996, 95 women homicide victims in 1997, 90 women homicide victims in 1998 and 73 women homicide victims in 1999.

Table 11
Homicide Victims

Year	Victims	Rate	Pct. Change
1996	99	0.51	
1997	95	0.48	-5.4
1998	90	0.45	-6.5
1999	70	0.36	-19.8

There were two (2) Hispanic homicide victims from 1996 through 1999, accounting for 0.6% of women victims. In fifteen (15) cases, ethnicity was listed as unknown. All other cases were reported as being Non-Hispanic.

Women homicide victims ranged in age from newborns to 93 years old. Women from age 25 through age 44 accounted for 51% of victims. The highest rate of victimization occurred among women between and including 25 and 34 years of age. The lowest rate of victimization occurred among girls between and including 6 and 12 years of age.

Table 14
Homicide Victims by Age Group

Age Group	Number	Pct.	Rate
0 to 5	15	4.2	0.25

Family relations accounted for 143 or 45.5% of homicide victims. Within the family category, spouses were the most frequently reported family relationship, accounting for 21% of all women homicide victims. The category, known to victim, accounted for 73 (23.2%) of cases followed by romantic relationships which accounted for 21.7%. Strangers accounted for 24 (7.6%) of homicides.

Table 15
Relationship of Homicide Victims to Offenders

Victim to Offender Relationship Group	Number	Pct.

Most homicides occurred either late at night or in the early morning hours. The 8:00 PM to 11:59 PM time period accounted for 30.8% of homicides. The midnight to 6:59 AM time period accounted for 23.5% of homicides.

Homicides by Time of Day

Forcible Sex Offenses

Forcible sex offenses include rape, forcible sodomy, sexual assault with an object and forcible fondling. From 1996 through 1999, a total of 14,703 women were victims of forcible sex offenses in South Carolina.

Table 18
Forcible Sex Offense Victims

<u>Year</u>	<u>Victims</u>	<u>Rate</u>	<u>Pct.</u> <u>Change</u>
1996	3,813	19.7	
1997	3,831	19.5	-0.9

1998	22.2	15.9
1999	21.0	15.6
Total	22.7	16.7

Note: Rate per 10,000 women with that racial group.
Source: SCIBRS, SLED; Population estimates, B&CB ORS.

There were 66 Hispanic women reported as victims of forcible sex offenses from 1996 to 1999. This represents 0.4% of all victims of forcible sex offenses. In 711 cases, ethnicity was unknown. The remaining 14,703 cases were reported to be Non-Hispanic.

Victims of forcible sex offenses ranged in age from newborns to 99 years of age. Women from 6 through 17 years of age constituted 50.8% of victims. The highest forcible sex offense victimization rate was experienced among women between and including the ages of 13 and 17, with a victimization rate of 80.6 per 10,000. The median age of forcible sex offense victims was 15 years old, the mean average age of forcible sex offense victims was 18.9 years.

Table 21
Forcible Sex Offense Victims by Age Group

Age Group	Number	Pct.	Rate

Forcible Sex Offense Victims by Age

The most frequently reported victim to offender relationship in forcible sex offenses was that of acquaintance (42.8%). The relationship of stranger was the next most frequently occurring relationship, accounting for 16.3% of forcible sex offenses. Approximately a quarter of all forcible sex offenses occurred within a family relationship.

Table 22
Relationship of Forcible Sex Offense Victims to Offenders

Victim to Offender Relationship Group	Number	Pct.
Known to Victim	7,546	53.5
Family	3,537	25.1

Robbery

There were 10,284 women victims of robbery in South Carolina from 1996 through 1999. There were 2,469 in 1996, 2,686 in 1997, 2,535 in 1998 and 2,594 in 1999.

Table 27

More kidnappings of women occurred on Saturday than any other day of the week. Friday was the second most common day for kidnapping. The least number of kidnappings occurred on Thursday.

Table 65
Kidnapping by Day of the Week

Day of the Week	Number	Pct.
Sunday	334	14.3
Monday	310	13.3
Tuesday	309	13.3
Wednesday	327	14.0
Thursday	307	13.2
Friday	354	15.2
Saturday	387	16.6

Source: SCIBRS, SLED

More kidnappings occurred from 8:00 PM to 11:59 PM than any other time period. A majority of kidnappings occurred either in the late evening or early morning hours.

Table 66
Kidnapping by Time of Day

Time	Number	Pct.
Midnight to 6:59 AM	642	27.6
7 AM to 11:59 AM	280	12.0
Noon to 2:59 PM	234	10.1

Summary

Examining violence against women as a single phenomenon may be useful for some purposes, but it is probably not a very useful approach for programmatic or policy relevant analysis. The differences in victimization patterns were, in some cases, noteworthy. Victims of forcible sex offenses tended to be much younger than victims of other offenses such as robbery, aggravated and lesser assaults, or homicides. Victims of forcible sex offenses were also more likely to have been victimized by someone who was known to them as a friend, neighbor or acquaintance, then by a family member or a romantic interest (although family relationships accounted for approximately a quarter of forcible sex offenses). Women were more likely to have been assaulted or killed by family members than by a person involved in any other type of relationship. Violent victimization by strangers was relatively infrequent, except in the case of robbery, where it was the rule rather than the exception.

Race was an important factor in violent victimization: minority women were disproportionately represented as victims in all violent crime categories. However the degree of disproportionality varied by offense group. The victimization rates of minority women were much greater as homicide and assault victims than it was among forcible sex offense or robbery victims. Given the small numbers of Hispanic victims, ethnicity does not appear to have been an important factor. However, it is important to consider the possibility that confounding factors such as non-reporting due to language or cultural barriers might have been at work.

The use of deadly weapons was relatively uncommon in violence against women. However, taken as a blanket statement, this could be misleading. Deadly weapons, particularly firearms, were involved in most homicides and robberies. Deadly weapons were involved in most aggravated assaults, although firearms were used about as frequently as knives, blunt objects and hands, feet, fists and other personal weapons. Deadly weapons were seldom involved in forcible sex offenses.

Simple assault and intimidation constituted the bulk of violence against women. While that may seem preferable to a situation where other, more potentially harmful or even lethal, crimes predominate, this finding leads inexorably to other questions and concerns. Do these assaults represent widespread, isolated incidents or do they represent the repetitive, ongoing victimization of a smaller group of individuals? Since a major portion of lesser assaults occur within the context of a family or romantic relationship, are there policy implications specific to those circumstances? Within family and romantic relationships what circumstances or situations trigger these acts and do they tend to escalate?

The purpose of this analysis was to provide an overview of violence against women to serve as a baseline of information. The SCIBRS data, maintained by SLED, provide a valuable resource for this purpose and should serve as a continuing source of information about violence against women. It is important to note that the scope of these data is limited to items that are descriptive of the event itself and not the underlying causes. While more in-depth research would be required to address some of the questions raised by the findings, SCIBRS data can provide valuable service by serving as a means by which to target incidents merit further examination.

Appendix A

Criminal Offense Definitions

Aggravated Assault: An unlawful attack by one person upon another wherein the offender uses a weapon or displays it in a threatening manner, or the victim suffers obvious severe or aggravated bodily injury involving apparent broken bones, loss of teeth, possible internal injury, severe laceration, or loss of consciousness. This also includes assault with disease (as in cases when the offender is aware that he/she is infected with a deadly disease and deliberately attempts to inflict the disease by biting, spitting, etc.).

Forcible Fondling: The touching of the private body parts of another person for the purpose of sexual gratification, forcibly and/or against that person's will; or not forcibly or against that person's will where the victim is incapable of giving consent because of his/her youth or because of his/her temporary or permanent mental or physical incapacity.

Forcible Sodomy: Oral or anal sexual intercourse with another person, forcibly and/or against that person's will; or not forcibly or against the person's will where the victim is incapable of giving consent because of his/her youth or because of his/her temporary or permanent mental or physical incapacity.

Intimidation: To unlawfully place another person in reasonable fear of bodily harm through the use of threatening words and/or other conduct, but without displaying a weapon or subjecting the victim to actual physical attack.

Kidnapping: The unlawful seizure, transportation, and/or detention of a person against his/her will; or of a minor without the consent of his/her custodial parent or legal guardian.

Murder: The willful (non-negligent) killing of one human being by another.

Negligent Homicide: The killing of another person through negligence.

Rape: The carnal knowledge of a person, forcibly and/or against that person's will; or not forcibly or against the person's will where the victim is incapable of giving consent because of his/her temporary or permanent mental or physical incapacity. (This does not include statutory rape.)

Robbery: The taking, or attempting to take, anything of value under confrontational circumstance from the control, custody, or care of another person by force or threat of force or violence and/or by putting the victim in fear of immediate harm.

Simple Assault: An unlawful physical attack by one person upon another where neither the offender displays a weapon, nor the victim suffers obvious severe or aggravated

bodily injury involving apparent broken bones, loss of teeth, possible internal injury, severe laceration, or loss of consciousness.

Sexual Assault with an Object: To use an object or instrument to unlawfully penetrate, however slightly, the genital or anal opening of the body of another person, forcibly and/or against that person's will; or not forcibly or against the person's will where the victim is incapable of giving consent because of his/her youth or because of his/her temporary or permanent mental or physical incapacity.

Appendix B

Overview of the Data Source

The SCIBRS data set consists of the compilation of incident reports forwarded to SLED by local law enforcement agencies throughout the state. Whenever a criminal incident is reported to law enforcement, the responding officer fills out a Uniform Incident Report that is forwarded to SLED. The information in SCIBRS is drawn from this report. SCIBRS is fully compliant with the FBI's NIBRS requirements and has additional data elements as well that SLED has determined would provide useful information. Participation in NIBRS among South Carolina's law enforcement agencies has been virtually 100% since 1991, with the exception of the final quarter of 1995. Law enforcement agencies that do not report directly to SLED, report through other local law enforcement agencies, usually the Sheriff's Department of that county. For the most part, SLED receives paper incident reports and enters the data, determining the offense classification based on a review of the narrative describing the incident. For law enforcement agencies that have been certified to transmit their data electronically to SLED, the offense classification is made at the local level. Part of the certification process involves training to make reliable offense classifications. These classifications conform to NIBRS standards, and unfortunately, cannot be made to correspond to state offenses such as criminal domestic violence. The SCIBRS data are maintained in annual files, created after the previous year's data have been received and entered. However, SLED keeps each file open for an additional year to enable it to receive edits, additions, deletions and other corrections. As a result, there are two types of annual files: year end files which are the first version of the annual file, and purge files which are the final, corrected version of that file. This analysis accessed the end of year file for 1999. This file will be updated and finalized sometime during 2001 and many, if not all, of the totals will change.
