

# We're protecting our family

The flu vaccine is the best protection against the flu. The flu can be very serious for young children, older adults and people with health conditions like asthma, diabetes or heart disease.

You can get your flu vaccine from your doctor, local health department or pharmacy (*no prescription is needed for anyone 12 years and older, age may vary by pharmacy*).

Everyone 6 months of age and older should get the flu vaccine every flu season.
